Coupling Square - Right Angle Spigot

TPE Extension Shank

Product Description

TPE Extension shanks are used where installers wish to extend the reach of the outlet to fit into a drain pipe which may be situated far into the wall.

Being made from TPE means that this is an inert material, so these extensions can be used to fit into TPE and PVC circular/downpipe outlets. They are manufactured to be rigid and are a simple tube shape with a flaring to the upper side, which will accommodate adhesive such as silicone when the end of the circular outlet is placed inside.

They have a slight cone shape, which helps when being inserted into the HDPE drainpipe. The two ribs on the side of the shank also help to ensure a tight, strong fit in the hole.

Performance

Resistant to deterioration by the sun, ozone and normal atmospheric conditions. They have excellent flexibility even at low temperatures and will not become brittle. The mechanical properties are maintained in the long term.

Operating Temperatures

-20°C; +70°C

Recycled Product

No

Material

TPE

Recyclable

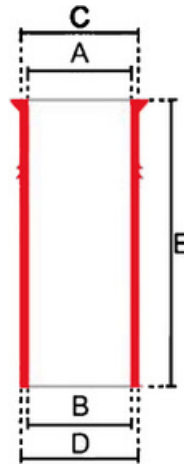

Yes
